

Abstract of the Disclosure:

A multilayer piezoelectric actuator device is provided having a plurality of piezoelectric elements (1a) and a plurality of internal electrodes (1b) stacked in a stacking direction to form a multilayer structure (1) so that each of the internal electrodes is placed between adjacent ones of the piezoelectric elements. A pair of external electrodes (2) are disposed on respective side surfaces of the multilayer structure and connected to adjacent ones of the internal electrodes, respectively. A pair of conductive members (3) are connected to the external electrodes, respectively. Each of the conductive members is spaced from and faced to the respective side surfaces of the multilayer structure.
